

Speed up daily manufacturing operations seamlessly with **SAP Business One** implemented by Cinntra Infotech

Before: Challenges & Opportunities

- Absence of comprehensive systems for inventory management and production planning.
- Non-availability of real-time data like accounts, manufacturing units data.
- To manufacture functionalized polymers on a commercial scale while maintaining precise quality control.
- Requirement of an integrated digital platform to accurately and efficiently manage sales, inventory, procurement, and financial accounting.
- Need of customer relationship management software for facile lead generation.

Why SAP and Cinntra Infotech

- SAP Business One is a robust enterprise resource planning solution specially designed for small and medium scale industries, which simplifies complex business operations.
- SAP ERP helps to improve the results of different processes such as Purchase, Inventory, Accounts, and Sales with real-time connectivity.
- Cinntra's IT solutions facilitate ERP implementation, custom development, and support with a 100 % success rate in SAP Business One implementation.
- SAP authorized and award-winning Cinntra Infotech was the right fit for the organization due to their extensive specialisation in state-of-the-art SAP B1 solutions & crystal clear track record of successful ERP implementations.
- Cinntra Infotech's highly specialized intelligent enterprise add-ons (Bar Code, Job work solution, Quality Management, Dealer Management, Billing Wizard, POS integration, Web Portal, and more) with SAP Business One, act as a one-stop solution; addressing the challenges of the Manufacturing Industry.
- Cinntra's team of experts performs business-specific R&D with the vision to deliver solutions that not only meet the business requirement for today but also continue to fulfill the customers' needs in the near future.
- Above all, Cinntra's engineered smart Customer Relationship Management module add-on has the potential to transform the way, PLUS, do business lead generation.

After: Automated Processes with Quality Control Add-on

- After the implementation of SAP B1 by Cinntra, the **PLUS** now has intuitive real-time reporting that provides an exact snapshot of the performance across multiple departments, which helps management to take result-oriented decisions.
- With Cinntra's QC add-on, the Quality Control processes effectively maintained the quality of the product.
- Automated alerts help in sales and purchase management.
- Integration of Cinntra's advanced CRM module made the lead generation process of PLUS streamlined.
- Admin can view report dashboards on any device to analyze key business insights and trends.
- Smooth production operations with closed coordination between sales, production planning, quality control.
