Fintech Industry automated its critical system with Cinntra SAP Business One Solution & experiencing unexceptional results

Before: Challenges & Opportunities

- The Legacy system disturbed the data management as it stored the operational data in a separate database. As a result, the
- employees from different business functions faced difficulty while accessing each other's information.
- Requirement of an automated system to process the data faster, which streamlines the neo banking services without fail.
- The existing system showed errors while entering the GST Returns & Reconciliation.
- The lack of real-time access functionality made it cumbersome to meet requirements on time.
- Presence of the same data at multiple locations increased the overhead costs & data integrity issues.

Why SAP & Cinntra Infotech

- SAP ERP financial features can help RapiPay operate more efficiently & innovate rapidly. Business One facilitates data transparency & ability to drill down every detail with real-time reporting.
- Cinntra has impressive, industry-specific experience with the complete range of SAP offerings (On-Premise & Cloud). Our working methodology, which is "Business-first" and "Implementation Strategy" support RapiPay's business objectives.
- Our SAP awards validate our potential to deliver quality business value for our clients.
- Our extensive expertise in Artificial Intelligence, Machine Learning, and Robotics Process Automation quickly transforms RapiPay's financial data and reporting landscape.

AFTER: Improved manageability with adept results

- Now RapiPay can manage all aspects of back-office operations through one single system.
- Easy to upload one or more sale invoices related to all agents in one go via. SAP Business One.
- Real-time insights into inter-departmental workflows facilitate them to make intelligent decisions.
- No problem of data duplication across departments with SAP ERP that results in zero data errors.
- Become easier to file GST returns and reconciliation with a custom GST solution.
- Control over the accounting functions for multiple locations and consolidated reportings.
